**KYOCERA MICROSOFT CONNECTOR**

DOCUMENT SHARING
MADE SIMPLE.

DOCUMENT SCANNING AND SHARING THROUGH ONE INTEGRATED SOLUTION.

KYOCERA MICROSOFT CONNECTOR STREAMLINES DOCUMENT SCANNING AND SHARING – JUST A SINGLE AUTHENTICATION IS REQUIRED TO ACCESS ALL THREE SERVICES.

KYOCERA Microsoft connector is a versatile business application created to simplify document scanning and sharing from a network connected Kyocera HyPAS-enabled MFP to an existing installation of Microsoft SharePoint, Exchange, and/or OneDrive for Business.

- The **SharePoint** feature allows users to access sites and document libraries on the SharePoint Server from a Kyocera MFP. Users can scan documents, enter index data and select file format conversion options on the touch screen. Users can also print documents on demand from their SharePoint document libraries.

- With the **Exchange** integration, users can transform important documents into digitized versions that can be emailed as attachments, and sent to any number of contacts from the global and personal address books on the Exchange server, directly through their Kyocera MFP.

- The **OneDrive for Business** feature allows users to upload and share their files utilizing their online cloud storage, as well as scan and print documents to folders shared with other users, from any Kyocera MFP.

By integrating Kyocera MFPs with three capabilities commonly used in day-to-day business operations, the KYOCERA Microsoft connector delivers a strong value and a comprehensive solution for Kyocera and Microsoft customers.

The 'three-in-one' flexibility of KYOCERA Microsoft connector helps make daily document processes more productive. Businesses can now easily manage workflows from their HyPAS enabled-Kyocera MFP and across existing installations of Microsoft SharePoint, Exchange, and/or OneDrive for Business, with a single business application.
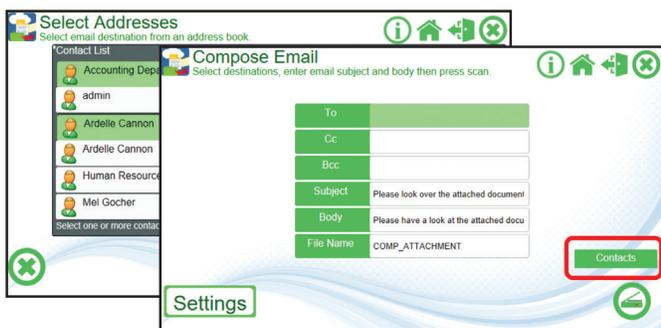

› **Microsoft SharePoint -** Share and organize information on-premise and online
› **Microsoft Exchange -** Business email service on-premise and online
› **OneDrive for Business -** Cloud storage and sharing service

Document Solutions

KYOCERA MICROSOFT CONNECTOR

HyPAS®

Kyocera's HyPAS (Hybrid Platform for Advanced Solutions) is a powerful and scalable software solution platform. It enhances your MFP's core capabilities, integrates seamlessly with all widely accepted software applications, and enhances your specific document imaging processes. With HyPAS, you'll share more information, optimize your resources, and streamline your document workflows.

Using the Single Sign-on authentication feature provides additional security when logging on to the MFP. Users can access the MFP easily with a single card swipe. View existing documents and folders on the MFP control panel.

Sending documents via email is easy. Simply enter the destination from an address book, compose the subject and message for the recipient, and scan.

KYOCERA Microsoft connector supports OneDrive for Business, enabling you to easily access your archived files using the simple search feature.

KYOCERA MICROSOFT CONNECTOR BENEFITS

› Single, integrated solution bringing added value and capabilities to existing hardware; users log in once and can access all three services
› Scan-to and print-from MS SharePoint and OneDrive for Business installations
› Scan and send emails from MS Exchange installations
› Fully compatible with Office 365 online versions of SharePoint, Exchange, and OneDrive for Business
› Simplified index and search feature for easy access to your documents in SharePoint
› Single Sign-On and Card Swipe Authentication for quick and secure login to Kyocera Business Applications
› OmniPage OCR version of the connector supports document conversion to Searchable PDF, Word, Excel, and Text (Basic has searchable PDF only)
